CASE STUDY / CONTENT OPERATIONS

WordPress SEO Content Publishing at Scale

FILTERBUY INC. | U.S. HVAC & AIR FILTRATION | 2023–2026

~50 SEO content pieces per week

Team workflow supported

THE BUSINESS NEED

A repeatable way to prepare, publish, and review high volumes of search-focused content across WordPress sites—without losing consistency in formatting, on-page SEO, or editorial quality.

MY ROLE & CONTRIBUTIONS

01

Content planning & briefs

Keyword and intent inputs, page outlines, target headings, and content structure.

02

WordPress publishing & SEO

Formatting, metadata, headings, image checks, internal links, and page updates.

03

Editorial QA & processes

Draft checks, inconsistencies, link reviews, reoptimization, and documented SOPs.

Observed operational scope: Supported a recurring ~50-piece/week team pipeline, WordPress content optimization and publication, quality checks, and ongoing SEO reviews. No standalone ranking or revenue lift is claimed.

A quality-first publishing process

The original client SOP used structured SEO briefs, Claude-supported drafts, brand voice checks, keyword-linked pages, and editorial QA. The framework below is a modernized example, not a claim that every improvement was implemented at Filterbuy.

1

Topic & search intent

Confirm the audience question, primary intent, existing coverage, and page purpose.

2

SEO brief & outline

Build H1/H2 structure, topical subquestions, relevant entities, and suitable sources.

3

AI-assisted draft

Use AI for scaffolding and editing; follow the brand guide and add real subject value.

4

Human fact-check

Check claims, statistics, quotes, sources, dates, and potentially sensitive advice.

5

On-page optimization

Write useful metadata, natural anchors, context links, and scannable sections.

6

WordPress QA

Review blocks, visuals, alt text, responsive layout, links, URL and publish settings.

7

Publish & improve

Check the live page, then use Search Console insights for meaningful refreshes.

THE 2026 EDITORIAL PRINCIPLE

Human value first. AI accelerates the workflow; it does not replace evidence, originality, or final accountability.

What a publish-ready page needs

A reusable content-release checklist, informed by the original SOP and aligned with current Google Search guidance.

CONTENT

Intent answered directly; non-generic value added; claims, quotes and sources verified.

STRUCTURE

One clear H1, descriptive H2/H3s, useful summaries, readable paragraphs and lists.

ON-PAGE SEO

Title and description checked; links relevant; keywords natural; no forced anchor quotas.

WORDPRESS

Correct block styling, image alt text, responsive display, URL, categories and publish status.

FINAL REVIEW

Preview checked on mobile and desktop; links tested; approvals and corrections tracked.

POST-PUBLISH

Live page checked; revisit only when search data or changed facts justify updates.

EVIDENCE & ATTRIBUTION

Verified from project history: SEO publishing, QA, reoptimization and SOP support across an approximately 50-piece/week team workflow. Not asserted: individual authorship of all 50 pieces, a measured traffic lift, or AI citation gains from this specific process.
